

Shipment Tracker

Automatic shipment tracking tool that scrapes live data from multiple shipping line websites and exports results directly to Excel — no more manual copy-pasting

Before (Manual Process)

- Had to **manually** open each shipping line's website for every BL number
- Visit **4 different websites** — CMA, Maersk, MSC, COSCO — one by one
- Manually **copy-paste** POL, POD, Container No, Vessel, ATA, Latest Status into Excel
- 50-100 BL numbers meant **hours of repetitive work**
- Human errors were common — wrong data copied frequently
- Had to **repeat the entire process** every time a status update was needed

 **MAERSK**

After (Automated)

- Add all BL numbers into one Excel file (tracking_2.xlsx → "BL Input" sheet)
- Run the script: `python main.py`
- It **automatically** scrapes CMA, Maersk, MSC, and COSCO websites
- All data — POL, POD, Container No, Vessel, ATA, Latest Status — **fills into Excel on its own**
- Hours of work done in **just minutes**

Supported Shipping Lines

Shipping Line	Scraper File
CMA CGM	scrapers/cma.py
Maersk	scrapers/maersk.py
MSC	scrapers/msc.py
COSCO	scrapers/cosco.py

Run this script

```
• (venv) apple@apples-MacBook-Air shipment-tracker % python main.py
```

Project Structure

```
shipment-tracker/
├── scrapers/
│   ├── __init__.py
│   ├── cma.py
│   ├── maersk.py
│   ├── msc.py
│   └── cosco.py
├── main.py
├── test_excel.py
├── tracking_2.xlsx    # Input + Output Excel file
├── logs/             # Log files
└── README.md
```

Setup & Installation

1. Clone the repo

```
git clone https://github.com/yourusername/shipment-tracker.git
cd shipment-tracker
```

2. Create virtual environment

```
python -m venv venv
source venv/bin/activate    # Mac/Linux
venv\Scripts\activate      # Windows
```

3. Install dependencies

```
pip install -r requirements.txt
```

How to Use

1. Open `tracking_2.xlsx`
2. Go to sheet **"BL Input"**
3. Paste your BL numbers and their shipping lines
4. Run the script:

```
python main.py
```

5. Results will be auto-filled in the **"Tracking Results"** sheet

Output Columns

Column	Description
BL No	Bill of Lading Number
Shipping Line	CMA / Maersk / MSC / COSCO
POL	Port of Loading
POD	Port of Discharge
Container No	Container Number
Vessel	Vessel Name
ATA	Actual Time of Arrival
FND	Final Destination
Latest Status	Current shipment status
Last Updated	Timestamp of last scrape

Configuration (main.py)

```
EXCEL_FILE = "tracking_2.xlsx"
SHEET_INPUT = "BL Input"
SHEET_OUTPUT = "Tracking Results"
HEADLESS = False # True = browser runs in background
DELAY = 2 # Seconds between requests
LOG_DIR = "logs"
```

Requirements

- Python 3.14+
- Google Chrome (for Selenium)
- ChromeDriver (matching your Chrome version)

Logs

After every run, logs are saved in the `logs/` folder with timestamps — useful for debugging.

Why I Built This

Manually tracking shipments in logistics was an extremely boring and time-consuming task. This tool automates the entire process — saving the team's time and keeping the data accurate.
